

## Features and Benefits

- Any-to-Any connectivity
- Aggregate 10G links to 1G tools
- Intelligently filter via Citrus™ web GUI or CLI
- Replicate traffic to multiple tools
- Solutions for monitoring asynchronously routed traffic

## Applications

- Packet aware 10G network monitoring
- Isolate & capture sessions across parallel links & switches
- Share span ports between multiple IT teams
- Filter and customize session based data flows to each tool
- Divide large loads across multiple monitoring tools

## Product Description

Gigamon delivers Intelligent Data Access Networking<sup>®</sup> to enhance monitoring of organizational data centers.

The GigaVUE-2404 is a high density Data Access Switch for 10G networks. Housed in a low profile 2U chassis, the GigaVUE-2404 aggregates, filters and replicates traffic flows across multiple passive security and monitoring tools. It is a powerful 10G network aggregator capable of full line rate performance.

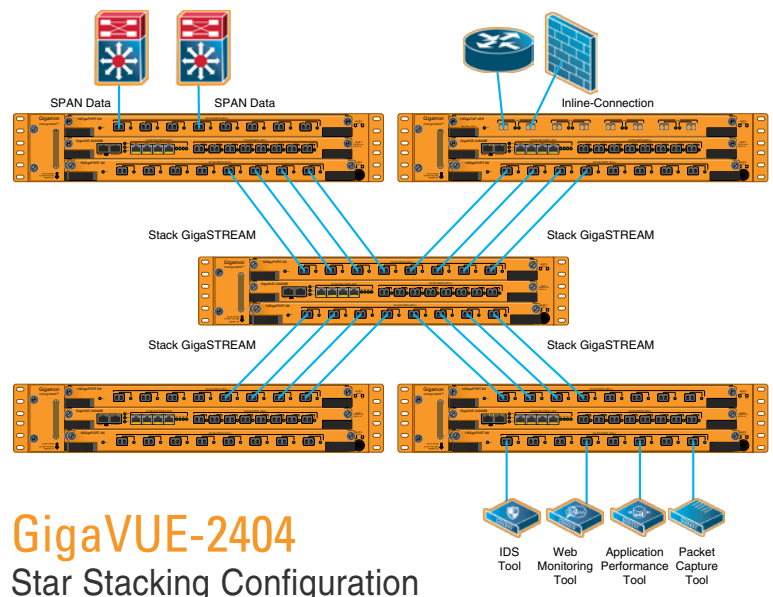

The modular design allows network managers to deploy the exact number of ports necessary to fit their requirements.

The base chassis houses eight 10 GigE ports and four 1G ports and scales to a maximum of twenty-four 10G ports.

Multiple GigaVUE-2404 switches can be stacked together or with existing GigaVUE-420 devices into a much bigger virtual GigaVUE<sup>®</sup> fabric of over 200 ports, running in either a master-slave or star configuration. GigaVUE-2404 switches are designed for compatibility with traffic coming from the GigaVUE-420.

## The GigaVUE-2404 Family

- GigaVUE-2404 | Twenty-four 10G & four 1G ports
- 10-GigaTAP | Fault-tolerant taps for copper or optical links
- GigaPORT-8 | Expansion with 8 optical 10G ports per blade
